

HOUGHTON WINES

26th June 1998

Ref: NC:kb;037

To Whom It May Concern

Houghton Wines have used the product Insultec, which was supplied and applied by the company Envirocool WA.

We experimented with two stainless steel tank lids, one painted with Insultec and one unpainted stainless steel finish. With a duel temperature guage and probe placed on the inside of each of the lids, we found on a 40^o day in full sunlight, the lid painted with Insultec had a temperature gain of one degree. The other unpainted lid gained 18 degrees.

With this result, we had parts of the winery painted with good results.
